OB Anesthesia Fellows Virtual Grand Rounds

Online
Oct 12th
2016

Ashraf S. Habib, MBBCh, MSc, MHSc, FRCA

Professor of Anesthesiology
Professor in Obstetrics and Gynecology
Chief, Division of Women's Anesthesia
Duke University

Vasopressors for Spinal Induced Hypotension

Hypotension occurs commonly in women undergoing cesarean delivery under spinal anesthesia and can adversely affect both the mother and neonate. We will discuss various strategies for the prophylaxis and treatment of spinal induced hypotension, with a particular emphasis on optimizing the use of vasopressors.
