Associate Professor of Anesthesiology
Program Director for OB Anesthesiology Fellowship
Associate Dean for Faculty Affairs & Women's Leadership
Medical College of Wisconsin, Milwaukee, WI

Uterine Rupture and Trial of Labor After Cesarean

Women who have had a previous Cesarean delivery present a dilemma for physicians, patients and society. We will explore the risks and benefits to mom and fetus of repeat CD v. TOLAC, taking a historical perspective.

Articles for Discussion (PDFs attached if free on web):

1. ACOG Practice Bulletin #115 published August 2010. VBAC.
2. Lydon-Rochelle M et al. Risk of uterine rupture during labor among women with a prior CD. NEJM 2001;345:3-8.
3. Cahill AG et al. Frequent epidural dosing as a marker for impending uterine rupture in pts who attempt VBAC. AJOG 202;355:e1-5.
4. Metz TD et al. Validation of VBAC prediction model. In pts with 2 previous CDs. O&G 2015;125:948-52.

January 2017: Libby Ellinas, Uterine Rupture
