Assistant Professor, Department of Anesthesiology
Program Director, Obstetric Anesthesiology Fellowship
Duke University Medical Center, Durham, NC

Obstructive Sleep Apnea in Pregnancy

Obstructive sleep apnea in pregnancy has recently been associated with adverse maternal and fetal outcomes, such as hypertensive diseases of pregnancy. Screening strategies for OSA used in non-pregnant populations have not been shown to be reliable, and further research is needed to clarify rationale screening approaches. Peripartum safety considerations for laboring and surgical patients with OSA on labor and delivery will also be discussed.
